MINERALS

# LA GOLONDRINA COLOMBIA

## FOCUSING ON HIGH-GRADE PLUS MILLION OUNCE GOLD DEPOSITS

La Golondrina is located in an underexplored region of high-grade Intrusive Related Gold Deposits. La Golondrina is an underground high-grade room and pillar gold mine development with significant exploration potential over at least 400m of vertical extension.

Previous rock-chip sampling of vein material returned an average 13g/t Au from 51 samples. Samples of host rock have returned up to 3.8 g/t Au and 6.8 g/t Au has been returned from a vein-stockwork zone.

### THREE STYLES OF GOLD MINERALIZATION

- Discrete high-grade (up to 60 g/t Au) shallow-moderate dipping veins in tonalite
- Vein, veinlet and sulphide zones to 1m wide in tonalite
- Veinlet stockwork sulphide and stratabound zones in hornfels sediment

Underground development has only recently exposed the tonalite hornfels contact. Tonalite hosted mineralization is as yet of unknown thickness & grade.

No previous drilling has been conducted on the property, a 1500m drill program will commence in Q1 2016 to test stack frequency and tonnage potential of veins, vein zones and mineralised hornfels.

Current underground development is on exposed veins only. Much of the license area is concealed under volcanic ash & soil.

Tonalite

Hornfels

### FUTURE PLANS

- Complete underground survey of existing workings
- Complete saw-cut channel sampling of veins, vein zones & wall rocks
- Collate all geological, geochemical & geophysical data to generate drill targets
- Secure agreements over nearby mining & exploration licenses

## EXPERIENCED & SUCCESSFUL MANAGEMENT TEAM

Royal Road Minerals was founded and established in 2010 by the original founders and Directors of Lydian International Ltd.

The team has worked in exciting and prospective jurisdictions throughout the world and were integral in the discovery and development of various other gold deposits in such places as Armenia, Kosovo, Colombia, Peru, Argentina and Chile.

- Tim Coughlin CEO & Director
- Rebecca Hudson CFO
- Hector Vargas Managing Director, Colombia
- Ivan Devia Operations Director, Colombia
- Pete Mullens Chairman

## LOCATION: COLOMBIA

Colombia is viewed as one of the most prospective and underexplored countries in the World. Since the 1500's Colombia has produced +200M ounces of gold and in the last 12 years in excess of 50M new reportable gold ounces have been discovered.

La Golondrina gold project is located in the highly prospective La Llanada region of southern Colombia within an underexplored region of high-grade Intrusion Related Gold deposits.

## DEAL STRUCTURE

In Oct 2015, Royal Road Minerals executed an Option Agreement which provides the Company with a three-year option to acquire 100% of La Golondrina by completing a minimum of 1500m of drilling.
